

SDT-5000 Satellite Modem

Back View

SDT-5000 Satellite Modem

The SDT-5000 Satellite Modem replaces the telephone line modem where a land-line is not available. The SDT-5000 uses the world's most reliable fixed satellite wireless communications network. The rugged and easy-to-install pole-mounted modem ensures that no matter the conditions or location, full duplex wireless data communication between central offices and field assets will never be threatened.

In remote settings or difficult-to-access sites, acquiring and responding to process control and alarm data can be challenging and costly. The SDT-5000 provides a real-time, low cost, bi-directional data communication solution for applications in remote locations where telephone service is not available.

Features and Benefits

- Cost comparable to standard telephone line service
- Satellite network for superior coverage
- Uses standard RS-232 connection
- Fully integrated into weather resistant package suitable for outdoor deployment
- Geosynchronous L-band satellite
