

TSM-2000

Card Access

The Card Access Option allows site owners/managers to control all access to all sites. The expense of re-keying is eliminated. One card may be issued for entry into one site or multiple sites. Cards may be activated and deactivated remotely offering complete site access control. The proximity card reader provides a more stable and weatherproof environment than “swipe” technology. The ability to keep detailed logs of who has entered with the date and time proves invaluable when sites are being shared by one or more companies.

Card Access System Benefits

- Proximity card reader is weather proof unlike “swipe” technology.
- Detailed logs of entries that include date, time, and number of who has entered a site prove invaluable to sites with multiple companies sharing space. In a shared site, knowing who has entered and what cabinets have been opened offers added security to tenants.
- Cards can be programmed for one site or hundreds of sites so personnel responsible for multiple sites no longer have to keep track of multiple keys.
- The ability to deactivate a card remotely gives the tower site owner/operator the security of knowing they don't have to recover a key or worry that a key has been duplicated if an employee was working temporarily or terminated.

Card Access System Features

- Proximity Card Head Reader
- Sixteen Doors and 150 Card Capacity per System
- Temporary Access may be Optioned by Temporary Code or Remote Buzz-In
- Key Chain FOB or Credit Card Size Card Available
- One Card Can Access Multiple Sites
- All Entries, Dates, and Times can be Stored and Reports Generated.
